

The exponential growth of data is placing new demands on the facilities that house it. On-site enterprise locations are giving way to larger and more flexible developer-led co-location data centers.

Mission Critical

Building a new operational infrastructure

Whether adding a data closet to your corporate offices or looking for a site on which to build your co-location space, we understand the unique needs of mission critical clients. Just as your customers expect reliability, speed and security, we'll deliver your project with predictable outcomes.

Having built the world's first LEED v4 data center, we also appreciate the importance of sustainability and efficiency to an industry perceived as a resource consumer. We will work with you to optimize the performance of your facility for your own business and for your customers.
