

SUMMARY

# **Tech Adoption**

### 2018 Survey Findings Trade Partners' Use of Technology

We believe technology improves how we work so we conducted a survey of our trade partners to better understand what technology they use and why - with the goal of improving collaboration on our projects.

## Summary

Technology is important to the future of our industry. So how well are we taking advantage of all it has to offer? Our findings show a modest increase in adoption.

Our regional research aligns with national industry research and extends to partners of all types and sizes - to compare progress and show an accurate picture of the market.

**ADOPTION IS ON THE RISE** From this year's survey, we saw an increase in overall adoption over the past 2 years:

- 77% use mobile technology
- 56% of the large trades use BIM [up from 45%]
- 50% only use BIM if required [down from 67%]
- 50% use BIM because of its value [up from 33%]
- Those who started using BIM in the past 3 years rose from 16% to 24%.
- The number of those with in-house modelers has increased.

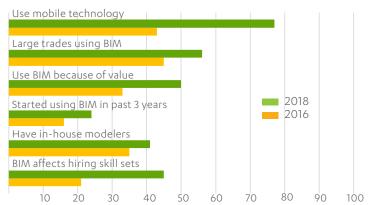

**BUT NOT AT THE RATE WE HOPED** Other findings remained relatively flat or saw little gains, indicating the value of BIM is not widespread.

- The use of BIM on a majority of projects only increased from 8% to 10%.
- The use of BIM for prefabrication saw a slight decline [38%].
- The number one reason for using BIM remains "project requirement."

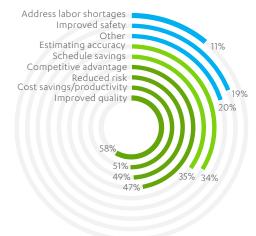

#### WHAT'S NEXT

- 01. As GCs move more toward paperless, trades will have to follow. The use of mobile technology jumped up and we predict will be close to 100% in another 2 years.
- 02. GCs should start requesting the model. 73% of respondents who model either don't share them with the GC or only share them upon request.
- 03. Few trades have established thresholds for using BIM. Having a written strategy will help them get the most out of the technology.

#### 2016-2018 COMPARISON OF TECH ADOPTION

#### PERCEIVED AREAS IN WHICH BIM PROVIDES VALUE

#### **CHALLENGES TO GREATER ADOPTION**

INTERNAL Lack of in-house modeling staff 22%	Lack of company leadership support <b>4%</b> Lack of training <b>13%</b>
EXTERNAL	Liability concerns 1%
Information not used in the field <b>17%</b>	Lack of standardizations, inconsistent implementation Not a project requirement 11% 39%
	th changes in technology <b>3%</b> software options <b>2%</b> ardware issues <b>4%</b>
Takes too much time No cost v <b>8% 24%</b>	alue
OTHER 14%
